Roman Bastrykin

Frontend Developer | React, TypeScript, Next.js

Belgrade, Serbia | +381 65 3415 506 | rel_daisy@icloud.com | plancktask.site

SUMMARY

Frontend Developer with 3 years of commercial experience building and scaling production React applications for an EdTech platform used by 4,000+ schools and kindergartens. Focused on web performance and Core Web Vitals (cut LCP from 4–5 s to ~1 s), reusable component architecture and data-driven UI decisions backed by web analytics. Owns features end-to-end, from requirements and architecture to release and measurement, and works effectively both independently and with backend developers and product stakeholders.

SKILLS

Languages: JavaScript (ES6+), TypeScript, HTML5, CSS3, XSLT

Frameworks & Libraries: React, Next.js (Server Components), Tailwind CSS, SASS/SCSS, MUI, GSAP, Motion, dnd-kit, GrapesJS

State & Data: TanStack Query (React Query), Zustand, React Context, REST API integration

Testing: Vitest, React Testing Library, unit and integration testing

Performance: Core Web Vitals (LCP), Lighthouse, lazy loading, performance optimization

Auth & Security: WebAuthn, Passkeys, JWT, HTTP-only cookies

Tools & DevOps: Git, GitHub Actions, GitLab CI/CD, Docker, Vite, Webpack, ESLint, Figma

Architecture: Component-based architecture, Feature-Sliced Design (FSD), responsive design, cross-browser compatibility

Analytics: Yandex Metrica (conversion funnels, goals and event tracking, user behavior analysis)

PROFESSIONAL EXPERIENCE

Frontend Developer, E-Publish JSC 06/2023 – 06/2026

EdTech platform for school and kindergarten websites (edusite.ru) Moscow, Russia

- Built and maintained the School Website platform used by 4,000–5,000 schools and kindergartens, shipping new features while keeping a high-traffic production system stable.
- Improved Largest Contentful Paint (LCP) from 4–5 s to ~1 s on an image-heavy page through lazy loading and targeted performance optimization.
- Owned frontend architecture decisions for the School Libraries product line, setting a clear structure up front that prevented scaling and maintainability issues as the product grew.
- Launched the School Libraries MVP and presented it to librarians across multiple regions of Russia, turning attendees into the product's first clients, several of whom are still active users.
- Delivered 20+ reusable, production-grade React components, eliminating widespread code duplication across the product line and speeding up development of new features.
- Replaced CKEditor with a custom GrapesJS-based visual page editor with reusable content blocks, making page building much simpler for non-technical users.
- Tracked user behavior, feature adoption and conversion funnels with Yandex Metrica and turned the insights into UI and performance improvements that increased engagement.
- Refactored poorly structured legacy XSLT logic that blocked support for new legislative requirements, adding stronger type safety and error handling.
- Fixed a critical Docker / GitLab CI build failure on fresh environment setups that had been unresolved for ~6 months, within 2 days, and documented it to prevent recurrence.
- Diagnosed and resolved cross-service API integration and data-processing issues together with backend developers.

PROJECTS

PlanckTask – Kanban Task Management App plancktask.site

React, TanStack Query, dnd-kit, WebAuthn, JWT, Vitest, React Testing Library, Docker, GitHub Actions

- Architected the application with Feature-Sliced Design (FSD) for long-term scalability and maintainability.
- Implemented multi-level drag-and-drop across boards, columns, tasks and subtasks, with a custom weighted-ordering algorithm that minimizes database writes on reorder.
- Built optimistic UI updates with TanStack Query for instant perceived responsiveness.
- Implemented passwordless authentication with WebAuthn (Passkeys), JWT and HTTP-only cookies.
- Covered critical business logic and API interactions with unit and integration tests (Vitest, React Testing Library).
- Set up CI/CD with GitHub Actions for automated testing and deployment; containerized the app with Docker.

Think Twice – AI Startup Marketing Website Team of 2, not yet launched

Next.js, React Server Components, Tailwind CSS, Figma

- Built the frontend of an early-stage AI startup's marketing website in a team of two developers.
- Translated Figma designs into responsive, reusable React components using Next.js Server Components and Tailwind CSS.
- Resolved third-party dependency conflicts by evaluating and replacing incompatible libraries.
- Achieved Lighthouse scores of 93 Performance, 94 Accessibility and 100 Best Practices.

EDUCATION

B.Sc. in Applied Computer Science (Internet Technologies & Mobile Applications) 09/2023 – Present

Moscow Institute of Technology Moscow, Russia

LANGUAGES

Russian – Native | English – Upper-Intermediate (B2)
